ABSTRACT

An electrical junction box including a junction box body, and a cover which houses and holds the junction box body is provided. A guide rail groove is provided on any one of an inner surface of the cover and an outer surface of the junction box body, and a guide rail guided by the guide rail groove is provided on the other thereof. Further, the guide rail groove is formed so that the inlet side thereof is a wide groove part having a width wider than that of the guide rail.
